A.Title: Sequence and analysis of chromosome 1 of the plant Arabidopsis.

A.Reference number: A86141; MUID:21016719; PMID:11130712

A.Accession: F96556
A.Status: preliminary
A.Molecule type: DNA
A.Residus: 1.440 <STO>
A.Gross-references: UNIPROT:081642; UNIPARC:UPI000004837A; GB:AE005173; NID:gl1094766; PJ
A.Genetics: F19624 4
A.Gene: T19624 4
A.Map position: 1

Submitted (JUN-1995) to the EMBL/GenBank/DDBJ databases.

Submitted (JUN-1995) to the EMBL/GenBank/DDBJ databases.

-!-FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, laminin, type V collagen and integrins alpha-V/beta-1, alpha-V/beta-3 and alpha-IIb/beta-3. May play a role in dentinogenesis and/or maintenance of dentin and dental pulp.

-!- SUBUNIT: Homotrimer; disulfide-linked.

-!- SIMILARITY: Contains 3 BGF-like domains.

-!- SIMILARITY: Contains 1 TSP N-terminal (TSPC) domain.

-!- SIMILARITY: Contains 3 TSP type-1 domains.

-!- SIMILARITY: Contains 7 TSP type-3 domains.

-!- SIMILARITY: Contains 1 TSP V-terminal (TSPN) domain.

-!- SIMILARITY: Contains 1 TSP V-terminal (TSPN) domain.

J. FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and
Cell-to-matrix interactions. Can bind to fibrinogen, fibronectin,
T. FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and
Cell-to-matrix interactions. Can bind to fibrinogen, fibronectin,
Taminin, type v collagen and integrins alpha-V/beta-1, alpha-
V/beta-3 and alpha-III/beta-3.
Cell-to-matrix: Contains 1 TSP C-terminal (TSPC) domain.
Cell-to-matrix: Contains 1 TSP type-1 domains.
Cell-to-matrix: Contains 7 TSP type-3 domains.

"Expression and initial characterization of recombinant mouse thrombospondin 1 and thrombospondin 3.";

L FEBS Lett. 387:36-41(1996).

- FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, laminin, type V collagen and integrins alpha-V/beta-1, alpha-V/beta-3 and alpha-IIb/beta-3.

- SUBUNIT: Homotrimer; disulfide-linked.

- SIMILARITY: Belongs to the thrombospondin family.

- SIMILARITY: Contains 3 EGF-like domains.

- SIMILARITY: Contains 1 TSP C-terminal (TSPC) domain.

- SIMILARITY: Contains 1 TSP V-terminal (TSPN) domain.

- SIMILARITY: Contains 3 TSP type-1 domains.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Batent No. 690016
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
TITLE OF INVENTION: WITH INFLAMMATORY AUTOIMMUNE DISEASE, METHODS OF DETECTION
TITLE OF INVENTION: AND USES THEREOF
FILE REPERENCE: CL000790
CURRENT FILING DATE: 2000-01-28
PRIOR APPLICATION NUMBER: 60/231,401
PRIOR APPLICATION NUMBER: 60/231,401
PRIOR PILING DATE: 2000-09-08
NUMBER OF SEC ID NOS: 10823
SOFTWARE: FRAESEC for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 97, Application US/09939853A

SQUENCE 6333, Application US/09949016
| Patent No. 681239
| GENERAL INFORMATION:
| PAPLICANT: VENTER, J. Craig et al.
| TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED
| TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
| FILE REFERENCE: CLOO1307
| CURRENT FILING DATE: 2000-04-14
| PRIOR APPLICATION NUMBER: 60/241,755
| PRIOR PILING DATE: 2000-10-03
| PRIOR PILING DATE: 2000-10-03
| PRIOR PILING DATE: 2000-10-03
| PRIOR FILING DATE: 2000-09-08
| WINBER OF SEQ ID NOS: 2000-10-03
| SEQ ID NOS: 2000-10-04
| CREATION NUMBER: FAMING NOS: 2000-10-04
| CREATION NOMBER: FAMING NOS: 2000-10-05
| CREATION NOS: 2000-10-06

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          쉽
       Sequence 6441, Application US/09134000C

Patent No. 6617156

Patent No. 6617156

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

TITLE OF INVENTION: ENTEROCOCCUS PAECALIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: 032796-032

CURRENT APPLICATION NUMBER: US/09/134,000C

CURRENT APPLICATION NUMBER: US 60/055,778

PRIOR APPLICATION NUMBER: US 60/055,778

PRIOR APPLICATION NUMBER: US 60/055,778

SPRIOR FILING DATE: 1997-08-15

NUMBER OF SEQ ID NOS: 6812

SOFTWARE: Patentin version 3.1

SEQ ID NO 6441

LENGTH: 740
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             APPLICANT: Genellschaft fuer Biotechnologische Forschung mbH
APPLICANT: Bristol-Myers Squibb, Co.
APPLICANT: Bristol-Myers Squibb, Co.
APPLICANT: Brandt, Petran
APPLICANT: Brandt, Petran
APPLICANT: Brandt, Petran
APPLICANT: Cino, Paul M
APPLICANT: Cino, Paul M
APPLICANT: Octoberg, Steven L
APPLICANT: Hofle, Gerhard
APPLICANT: Weichenbach, Hans
TITLE OF INVENTION: DNA sequences for enzymatic synthesis of polyketide or
TITLE OF INVENTION: DNA sequences
TITLE OF INVENTION: US 99/23535
CURRENT APPLICATION NUMBER: DE 198 46 493.2
EARLIER PLICATION NUMBER: DE 198 46 493.2
EARLIER FILING DATE: 1998-10-07
MUMBER OF SEQ ID NOS: 107

New peptides that bind to or are recognized by alpha3-betal integrins, useful for inhibiting cell adhesion to extracellular matrix, cell motility and proliferation and for treating rheumatoid arthritis and cancer

Claim 4; Page 34; 84pp; English.

The present invention provides a number of peptides which bind to alphalbetal integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoid arthritis, macular degeneration, atherosclerosis, psoriasis and restenosis. The present sequence is an example of one of the peptides of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides a number of peptides which bind to alphalbetal integrins. They are useful in the modulation of cell adhesion and motility, and in the treatment of cancer, diabetic retinopathy, rheumatoioid arthritis, macular degeneration, atherosclerosis, psoriasis and restenosis. The present sequence is an example of one of the peptides of the invention
                                                                                                                                                                                    Alphaßbetal integrin; angiogenesis; cell proliferation; cancer; diabetic retinopathy; restenosis; atherosclerosis; rheumatoid arthritis; macular degeneration; psoriasis; cell adhesion; cell motility.
                                                                                                                                                                                                                                                                                                                                                                                    New peptides that bind to or are recognized by alpha3-betal integrins, useful for inhibiting cell adhesion to extracellular matrix, cell motility and proliferation and for treating rheumatoid arthritis and

The invention relates to diagnosing cancer other than prostate cancer in a male mammal, comprising assaying a test sample for increased level of semenogelin, or cancer in a female by assaying for the presence of semenogelin. Administering a semenogelin protein or polypeptide fragment or a semenogelin-specific antibody or active fragment, or a recombinant vector expressing the protein or antibody, is useful for inducing an immune response to a cancer in a mammal, where the cancer is not prostate cancer, particularly of epithelial origin such as lung cancer, papillary renal cell carcinoma, colon cancer, especially small-cell lung cancer (SCLC), or a melanoma. The present sequence represents the amino acid
                                          A new diagnosis for cancer other than prostate cancer in a mammal useful to detect cancer including lung cancer, particularly small cell lung cancer and melanoma comprises detecting semenogelin in a sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New purified thrombospondin fragment extracted from a body fluid, useful for diagnosing cancer e.g. adenoma, adenocarcinoma, carcinoma, lymphoma
                                                                                                                                                                                                                                                                                                       sequence of the thrombospondin-1 sequence containing synthetic peptide
which binds to alpha-3-beta-1 integrin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; thrombospondin-1; epitope; cancer; diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               151. .164

the present sequence is that or the N-returnata omeaan to mutant thrombospondia. (1929) ADJ0639. The invention relates to TSP fragments (80-100, 40-55 or 20-35 kDa mol.w.) found in plasma, and their use in clinical assays for cancer and for generation of antibodies and other concernations of the plasma, and their use in clinical assays for cancer and for generation of the Fragment or Dortion involves: (1) using an epitope shared by TSP and the TSP fragment or portion involves: (1) using an epitope shared by TSP and the TSP fragment or portion to obtain a epitope present in TSP but not in the fragment or portion; (2) using an epitope present in TSP but not in the fragment or portion; (2) using an epitope present in TSP but not in the fragment or portion. Suitable ceptiopes are provided ADJ7063-ADJ70631 betection or quantification of the TSP fragment or portion. Suitable complication of the TSP fragment or portion. Suitable ceptiopes are provided ADJ7063-ADJ70631 betection or quantification of the TSP fragment or portion. Suitable complication and the TSP fragment or portion is performed in order to detect the presence. The TSP fragment or portion is performed in order to detect the presence. The TSP fragment or portion is performed in order to detect the presence. The TSP fragment or portion is performed in order to detect the presence. The TSP fragment or portion is performed in order to detect the presence. The TSP fragment or portion is performed in order to detect the presence. The TSP fragment or portion is performed in the TSP fragment or performed in the TSP fragment or portion associated with clotting, a condition associated with clotting a sociated with consumption of platelets, hepartam the tendence of the TSP fragment or production associated with an entire certivation, a condition associated with an entire certivation, an appartame reaction, at a programmal order to the TSP fragment order where the TSP fragment order is the TSP fragment order with vascular intervales and condition associated with a c Human myocardial infarction-associated gene derived protein, SEQ ID 1022. Gaps or leukemia or as calibrators, indicators, immunogens and analytes. .. 0 sequence is that of the N-terminal domain of human Score 56; DB 8; Length 240; Pred. ```
has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleotide sequences given in the specification in the individual's nucleic acidg, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention turther comprising at least a contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino caid sequences given in the specification; an isolated polypoptide comprising an amino acid sequence given in the specification; an antibody that specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid molecule, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypoptide; a method for identifying an agent useful in treating or preventing method in according in in a nucleic acid molecule; a method of detecting a variant activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            sequence represents the protein of a human myocardial infarction-
sasociated gene containing one or more SNPs of the invention. Note: This
sequence was not shown in the specification. The sequence has come from
an electronic sequence listing downloaded from the WIPO website.
                  Human myocardial infarction-associated gene derived protein, SEQ ID 1020.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for identifying an individual who
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.
                                                            Myocardial infarction; detection; single nucleotide polymorphism; SNP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       composition for treating or preventing myocardial infarction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    91.8%; Score 56; DB 8; Length 432; 91.7%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's conclet acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises an isolated nucleic acid molecule comprising at least sontiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequences given in the specification; an isolated polypeptide comprishing an amino acid sequence given in the specification; an antipody fragment; an amplified polymorleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in fragment; an amplified polymorleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in polymorleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and an enthod for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method has cardiant activity. The nucleic acide of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or composition for treating or preventing myocardial infarction. This sequence represents the protein of a human myocardial infarction. This contains and composition for treating or preventing myocardial infarction. This invention and composition for the invention of an infarction of a human myocardial infarction. This invention and is infarction. This invention and is infarction and i
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        associated gene containing one or more SNP's of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             91.8%; Score 56; DB 8; Length 432; 91.7%; Pred. The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1c, cellular tumour antigen P53, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated mucleic candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetrophy, muscular diseases such as hypertrophy, immune disorders such as immune complex negatives.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer, sarcoidosis, nonarcoidotic pulmonary granulomatus diseases such as asbestosis and vascular pathologies involving an endothelial abnormality such as deep vein thrombosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 459 AA;

AAC77607 to AAC78448 encode the human cancer associated proteins given in AAB43398 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiabetheric; antichematic; antibacterial; antichritic; antichematory; antichyroid; antiallergic; antibacterial; antiviral; corruptic; antipportective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipportatic and antiangiogenic. The polynucleotides and polypeptides can be used for preventing, treating or medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides, antibodies, appropriates and antagonists from the present invention may be used to treat immune disorders by activating the proliferation, differentiation or mobilisation of continuous corruption to treat disorders of haematopoicit cells, autoimmune disorders, allergic reactions, differentiation or mobilisation of cisorders, allergic reactions, graft versus host disease and organ rejection, cancers, cardiovascular disorders, neurological disease and bacterial or viral infections. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to AAC78477 and AAB4240 represent sequences used in the exemplification of
                                                                                                                                                                                       diagnosis; cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiarthritic; antiviral; antidiabetic; antiarthritic; antiviral; antidiameatory; antithyroid; antiallergic; antibacterial; cardiant; dermatological; neuroprotective; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic; antiangiogenic; gene therapy; inflammation; immune disorder; haematopoietic cell disorder; autoimmune disorder; antiangiogenic; caction; graft versus host disease; organ rejection; haemostatic; thrombolytic; cardiovascular disorder; infection; neurological disease; drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acids comprising sequences encoding peptides useful for treating or diagnosing e.g. cancer.

The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interlettins, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 1C, cellular tumour antigen PS3, and vasoactive intestinal polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, unscular diseases such as hypertrophy, immune disorders such as immune complex nephritis.
                                                                                                                                                             Angiotensin converting enzyme splice variant; ACEV; interleukin 6; granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen P53; cyclin-dependent kinase inhibitor 1C; vasoactive intestinal polypeptide receptor 2; arteriosclerosis; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disorder; sarcoidosis; multiple sclerosis; immune complex nephritis; deep vein thrombosis; nonarcoidoic pulmonary granulomatous disease; endothelial abnormality;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as asbestosis and vascular pathologies involving an endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies.
                                                                                                                           Angiotensin converting enzyme (ACEV) splice variant protein #15.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    91.8%; Score 56; DB 4; Length 546; 91.7%; Pred. The present invention relates to a novel recombinant adenovirus vector mediated anti-neoplastic composition is prepared through cloning the cDNA sequence from the human peripheral blood cell by specific primer and reverse transcription-polymerase chain reaction (RT-PCR) method for coding TSF polypeptide, construction in human embryonic kidney cell 293 by Addasy system, and packaging and expressing the recombinant adenovirus vector of TSF. It can suppress the growth and transfer of cancer. The present sequence represents the TSF polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Angiotensin converting enzyme splice variant; ACEV; interleukin 6; granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen P53; cyclin-dependent kinase inhibitor 1C; vasoactive intestinal polypeptide receptor 2; arteriosclerosis; cancer; myocardial infarction, coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disorder; sarcoidosis; multiple sclerosis; immune complex nephritis; deep vein thrombosis; nonarcoidotic pulmonary granulomatous disease; endothelial abnormality;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase cinhibitor ic, cellular tumour antigen P53, and vasoactive intestinal caids are useful for identification of variant sequences and detection of cardidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis, cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as as sebestosis and vascular pathologies involving an endothelial abnormality such as deep vein thrombosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Angiotensin converting enzyme splice variant; ACEV; interleukin 6; granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen PS3; cyclin-dependent kinase inhibitor 1C; vasoactive intestinal polypeptide receptor 2; arteriosclerosis; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disorder; sarcoidosis; multiple sclerosis; immune complex nephritis; deep vein thrombosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nonarcoidotic pulmonary granulomatous disease; endothelial abnormality;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Angiotensin converting enzyme (ACEV) splice variant protein #13

The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor IC, cellular tumour antigen P53, and vasoactive intestinal colypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection of candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases cuch as diabetic nephropathy, muscular diseases such as hypertrophy, immune disorders such as immune complex nephritis, multiple sclerosis, cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases such as asbestosis and vascular pathologies involving an endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TSP-1; TSP-2; COMP; cartilage oligomeric matrix protein; thrombospondin; angiogenesis; tumour; treatment; cancer; arthritis; psoriasis; diabetic retinopathy; corneal graft rejection; glaucoma.

New nucleic acids are described which encode a protein comprising the second and third type 1 repeats of human TSP (thrombospondin)-1, but not the TYP (transforming growth factor)-beta activation region of human TSP-1. The nucleic acid of TSP (thrombospondin)-1 containing the second and third type-1 repeats and the COMP (cartilage oligomeric matrix protein) assembly sequence (COMP/TSP-1) was produced by PCR (polymeric protein) creation). Expression of COMP/TSP-1 caused inhibition of the growth of tumours in mice models. Thus the nucleic acids and proteins may be useful for treating angiogenesis related diseases such as cancer (by reducing the rate of growth and size of tumours), arthritis, psoriasis, diabetic retinopathy, corneal graft rejection, and glaucoma. They may also be used for treating human immunodeficiency virus (HIV) infection. Anti-angiogenic therspy has little toxicity, does not require the therapeutic agent to enter tumour cells or cross the blood-brain barrier, controls tumour growth independently of growth of tumour cell heterogeneity, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

```
The invention describes a composition comprising cDNA encoding fragments of human thrombospondin-1 (TSP -1), a type 1 repeat polypeptide and potent inhibitor of tumour growth and anglogenesis. The composition is useful for killing cancerous cells (preferably tumour); for reducing volume or inhibiting growth of a tumour (inhibiting neovascularisation in the tumour); for decreasing proliferation of tumour cells; in the treatment of diseases and conditions associated with anglogenic activity or misregulated growth and anglogenesis-mediated diseases such as cancer, solid tumour, tumour metaatasis, benign tumour, (e.g. haemangioma, acoustic neuromas, neurofibromas, trachomas, and pyogenic granulomas),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /label= Type_3 repeat domain

rheumatoid arthritis, psoriasis, ocular angiogenic diseases (e.g. diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasias, rebeosis), Osler-Webber syndrome, mycardial angiogenesis is telangiectasia, plaque neovascularisation, haemophiliac joints, angiofibroma or wound granulation. The composition induces apoptosis and inhibits neovascularisation in the tumour cells. This amino acid sequence represents human thrombospondin-1 (TSP-1), on which the recombinant proteins of the invention are based

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

UniProt_7.2:*
1: uniprot_sprot:*
2: uniprot_trembl:* Датараве :

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
